2-Post ProLine

Flexible Standard
This construction kit was designed for the use in small projects in ground-mounted systems. Tables can be designed differently through defined configurations, however by a flexible number of modules.

Proven New
This system is distinguished both by an easy, functional design and a reduced use of tools. The proven Clickstone-technology is used for the module fastening. Depending on the requirements, either posts or foot plates will be available.

Two Post
When it comes to the 2-Post ProLine, a higher structural stability is ensured even when soil or load conditions are difficult. Additionally, besides the use of ram posts, there is a possibility to connect the bars on concrete foundations by using foot plates and fix anchors.

High Availability
In order to implement small ground-mounting projects, we have a permanent stock of these components with a delivery time of a few days. The required small components are usefully commissioned in sets.

Maximum Service Life
Durability is a substantial feature for the 2-Post ProLine. The combination of aluminium, stainless steel as well as galvanised steel ensures a high corrosion resistance and a maximum service life.
Fixing of the module support on the rafter

1 Dependent on System, Inclination and Fixation to the Ground. For more details see technical system designs.
2 Please find the exact terms in the Mounting Systems GmbH warranty document.
